PERSONAL PROFILE

I've always been fascinated by two things: stories hidden in data and the tech that uncovers them. As a Data Analyst and Scientist, I don't just crunch numbers—I hunt for the "why" behind trends, using everything from SQL queries to neural nets. My tech obsession fuels this; whether I'm optimizing a model in TensorFlow, scripting automations, or testing new BI tools, I'm driven by how technology empowers smarter decisions. For me, data isn't just a job—it's a lens to see and shape what's next.
